ABSTRAK

Azhima, Sri Nikmatul. 2021. "Analisis Peran Orang Tua Terhadap Pemberian Gizi Seimbang Untuk Bekal Anak Di PAUD Bina Harapan Desa Muara Tabun": Skripsi, Jurusan Pendidikan Guru Pendidikan Anak Usia Dini, FKIP Universitas Jambi, Pembimbing: (I) Dr. Indryani, S.Pd., M.Pd.I (II) Dr. Haryanto, M. Kes

Penelitian ini bertujuan untuk menganalisis peran orang tua terhadap pemberian gizi seimbang untuk bekal anak di PAUD Bina Harapan Desa Muara Tabun. Bekal makanan adalah makanan yang dimasukkan kedalam kotak atau tempat yang mempermudah dalam pembawaannya, makanan yang sehat dan bergizi seimbang dibutuhkan anak sebagai penunjang dalam beraktivitas sehari-hari, oleh karena itu membiasakan membawa bekal makanan ke sekolah merupakan gaya hidup yang sebaiknya diberikan kepada anak oleh setiap orang tua. Jenis penelitian yang dilakukan adalah penelitian deskriptif kuantitatif. Sampel penelitian ini ialah seluruh orang tua anak di PAUD Bina Harapan desa Muara Tabun dengan jumlah anak sebanyak 35 anak.

Penelitian ini menggunakan pengolahan data dari hasil sebaran angket dari 35 responden yaitu orang tua anak terhadap 25 item pernyataan dari indikator peran orang tua terhadap pemberian gizi seimbang untuk bekal anak di PAUD Bina Harapan Muara Tabun. Kesimpulan pada penelitian ini yaitu analisis peran orang tua terhadap pemberian gizi seimbang untuk bekal anak di PAUD Bina Harapan desa Muara Tabun secara umum berada pada kategori "Baik" dengan berdasarkan presentase hasil sebaran angket mencapai 67%.

Kata kunci : Peran orang tua, gizi seimbang, bekal anak

KATA PENGANTAR

Puji syukur atas kehadiran Allah Subhanahu wa Ta'ala serta rahmat dan karunia-Nya yang dilimpahkan kepada penulis sehingga penulis dapat menyelesaikan skripsi berjudul “Analisis Peran Orang Tua Terhadap Pemberian Gizi Seimbang Untuk Bekal Anak Di PAUD Bina Harapan Desa Muara Tabun”. dapat terealisasi dengan baik. Skripsi ini disusun sebagai salah satu syarat untuk memperoleh gelar sarjana pendidikan dari Universitas Jambi.

Selanjutnya, penulis menyadari bahwa penyelesaian skripsi ini tidak terlepas dari bantuan dan bimbingan berbagai pihak. Oleh karena itu, penulis menyampaikan ucapan terima kasih kepada:

1. Bapak Dr. Drs. H. Hendra Sofyan, M.Si selaku ketua Program Studi Pendidikan Guru Pendidikan Anak Usia Dini Fakultas Keguruan dan Ilmu Pendidikan Universitas Jambi
2. Ibu Dr. Indriyani, S.Pd., M.Pd.I selaku pembimbing utama yang telah memberikan dukungan dan motivasi yang sangat berarti bagi saya

BAB I

PENDAHULUAN

1.1 Latar belakang

Pendidikan sering kali diartikan sebagai usaha manusia untuk membina kepribadiannya sesuai dengan nilai-nilai di dalam masyarakat dan kebudayaannya. Dalam perkembangannya, istilah pendidikan atau paedagogic berarti bimbingan atau pertolongan yang diberikan secara sengaja oleh orang dewasa agar menjadi dewasa. Selanjutnya, pendidikan diartikan sebagai usaha yang dijalankan oleh seseorang atau kelompok orang lain agar menjadi dewasa atau mencapai tingkat hidup atau penghidupan yang lebih tinggi dalam arti mental (Djamaluddin 2014).

Orang tua merupakan sepasang ayah dan ibu yang berperan dalam merawat dan pemenuhan kebutuhan sehari-hari untuk anggota keluarganya. menurut

memberikan asupan gizi yang penting bagi tumbuh kembang anak. Menurut Yolanda, Y. A (dalam Purnama 2015) pemberian makanan sehat yang dilakukan oleh orang tua sangat penting dan mempunyai tanggung jawab sebagai pendidik untuk memenuhi kebutuhan gizi pada anak. Peran orang tua sangat dibutuhkan agar anak tidak mengkonsumsi makanan sembarangan. Orang tua memberikan pengertian pada anak tentang makanan merupakan hal yang tidak mudah, karena masih banyak anak-anak yang sudah terbiasa mengkonsumsi makanan tersebut. Tubuh akan memberikan tanda kenyang apabila energi tersebut masuk dan dapat memenuhi kebutuhan anak. Hal yang membahayakan untuk anak yang menyukai makanan atau jajanan manis dan dikonsumsi sebelum makan maka anak akan merasa kenyang, maka pentingnya mengenalkan makanan sehat pada anak sedini mungkin sehingga anak akan terbiasa dengan mengkonsumsi makanan sehat.

Berdasarkan penjelasan diatas anak usia dini seringkali disebut sebagai usia emas “golden age”. Pada masa ini orang tua yang ada disekitar anak harus memiliki kepekaan untuk dapat mengoptimalkan potensi yang ada dalam diri

teman-temannya, tertarik mempelajari hal baru didapat. Anak mempunyai tingkat aktifitas yang cukup tinggi, maka diperlukan asupan tinggi juga agar tercapai keseimbangan antara jumlah asupan dengan energi yang dikeluarkan dan juga agar kesehatan anak tetap optimal. Hal ini dapat dicapai dengan pemenuhan gizi sesuai umur anak dalam kehidupan sehari-hari Fikriyanti (dalam Wong, 2008).

Makanan yang bergizi akan mempengaruhi perkembangan fisik anak. Oleh karena itu, makanan yang dikonsumsi anak sebaiknya beraneka ragam, dan mengandung berbagai vitamin. Dalam pertumbuhan anak diperlukan gizi yang seimbang, supaya seluruh anggota badan dapat tumbuh secara wajar, pertumbuhan otot dan tulang dapat kuat, sehat dan nantinya bermanfaat. Selain perkembangan fisik, perkembangan psikis juga sangat dipengaruhi oleh kualitas gizi terutama dalam pembentukan pribadi anak. Cipta, rasa, dan karsa anak akan berkembang dan suatu saat akan menjadi matang. Jika psikisnya telah matang diharapkan pribadinya menjadi dewasa, terutama kecerdasan intelektual, kecerdasan spiritual, serta segenap potensi lain yang dimiliki anak (Mariasi, C.

pada anak harus mengandung zat gizi seimbang Andriani, M (dalam Wirjatmadi B, 2012).

Biasanya bekal yang dibawa anak kesekolah cenderung monoton dan hanya beberapa jenis makanan saja. Masalah pola makanan dan gizi yang sering terjadi di rentang usia anak 3-5 tahun antara lain adalah tidak suka sayuran, pilih-pilih makanan, dan cenderung menyukai “junk food” (Kurniasih dkk, 2010). Pengetahuan orang tua tentang gizi sangat berperan penting menentukan pilihan makanan anak yang bergizi seimbang, karena orang tua yang menyediakan makanan untuk anak, selain itu orang tua juga merupakan orang terdekat yang dapat mendidik dan menjaga pola makan anak.

1.2 Identifikasi masalah

Dari latar belakang diatas dapat disimpulkan identifikasi masalahnya adalah sebagai berikut :

1.2.1 Orang tua abai terhadap pemberian gizi seimbang

BAB II

KAJIAN TEORITIK

2.1 Peran orang tua

2.1.1 Peran orang tua dalam pemberian gizi seimbang kepada anak

Orang tua adalah pendidikan pertama bagi anak, oleh sebab itu keterlibatan orang tua dalam lembaga pendidikan anak usia dini sangat diharapkan agar dapat tercapai tujuan pendidikan anak usia dini. Menurut Ki Hadjar Dewantara dalam buku konsep dasar pendidikan anak usia dini, mengingatkan kita bahwa pendidikan merupakan tanggung jawab bersama antara keluarga, sekolah dan masyarakat. Hal senada juga diungkapkan oleh Regio Emilia yang menyatakan bahwa keterlibatan orang tua pada pendidikan anak usia dini merupakan sesuatu yang sangat penting, yang dikenal dengan pendekatan Reggio Emilia. Oleh karena itu, keterlibatan orang tua maupun masyarakat perlu dilibatkan oleh sekolah (TK) dalam rangka mendidik anak usia dini (Mumtakhonah, A. 2019).

sadar gizi, aktivitas fisik, kesehatan dan peningkatan akses dan mutu pelayanan gizi sesuai dengan kemajuan ilmu pengetahuan dan teknologi.

Berdasarkan pemaparan diatas dapat disimpulkan bahwa anak-anak adalah peniru yang handal. Karena itu, orang tua harus memiliki kebiasaan makan yang sehat agar anak-anak juga terbiasa dengan pola makan yang sehat. Orang tua sebaiknya dapat memberikan pengertian dan membiasakan diri mengkonsumsi makanan yang diperlukan tubuh, bukan sekedar makanan yang disukai. Dengan demikian orang tua bisa menjadi contoh pelaku hidup sehat bagi anak-anaknya.

Makanan yang diberikan untuk anak haruslah memenuhi hal-hal sebagai berikut :

1. Memenuhi kecukupan energi dan zat gizi sesuai umur.
2. Susunan hidangan disesuaikan dengan menu seimbang, bahan makanan setempat, kebiasaan makan, dan selera makan.
3. Bentuk dan porsi makan disesuaikan dengan daya terima, toleransi, dan

- (1) bahan makanan pokok sebagai sumber zat tenaga,
- (2) bahan makanan lauk pauk sebagai sumber zat pembangun,
- (3) bahan makanan sayuran sebagai zat pengatur,
- (4) bahan makanan buah-buahan, serta
- (5) susu dan telur.

Pemberian makanan bergizi ini sangat penting bagi anak usia dini. Karena untuk mengetahui sejauh mana perkembangan anak dalam mengkonsumsi makanan yang disesuaikan dengan usia anak. Tanpa ada pemberian makanan yang bergizi maka akan terganggu pertumbuhan anak baik fisik maupun mentalnya. Untuk itu sebagai pendidik maupun orang tua harus mengetahui cara pemberian gizi yang sehat terhadap anak pada setiap tahapan perkembangan anak.

Santoso dalam buku Kesehatan dan Gizi (2013:123) pemberian makanan yang baik kepada anak juga mempunyai tujuan sebagai berikut :

2.2 Gizi seimbang

2.2.1 Pengertian gizi

Menurut Saijah (dalam Made Astawan 2006) Gizi merupakan salah satu aspek yang sangat penting dalam pertumbuhan dan perkembangan anak usia dini. Pemenuhan gizi yang cukup pada anak di usia awal (0-6 tahun) dapat mempengaruhi perkembangan mental, termasuk kecerdasan anak. Kesehatan dan gizi anak sangatlah penting untuk diperhatikan, sejak dari dalam kandungan hingga lahir. Hal ini dikarenakan, kesehatan dan gizi sangat mempengaruhi pertumbuhan dan perkembangan anak. Anak yang mendapatkan gizi yang seimbang serta makanan yang sehat, akan tumbuh menjadi manusia yang berkualitas, begitu pula sebaliknya

Dinar Nur (dalam Sunita Almatsier 2009: 3) “Status gizi adalah keadaan tubuh sebagai akibat konsumsi makanan dan penggunaan zat-zat gizi, yang dibedakan antara status gizi buruk, kurang, baik, dan lebih”. Dalam pengertian yang lain Dinar Nur (dalam Suparisa 2002: 18) menjelaskan bahwa status gizi

makanan yang di konsumsi anak, terutama karbohidrat, lemak, dan protein merupakan sumber energi yang dibutuhkan untuk semua aktivitas anak.

Menurut Cakrawati (dalam Tejasari 2005:8) zat gizi diklasifikasikan ke dalam enam kelompok besar yaitu karbohidrat, protein, lemak, vitamin, mineral dan air.

1. Karbohidrat

Senyawa karbohidrat merupakan bagian terbesar dari senyawa organik, hal ini dikarenakan karbohidrat merupakan bahan pembentuk tumbuh-tumbuhan yang juga terdapat dalam hewan, namun dengan jumlah yang tertentu. Karbohidrat dibagi dalam tiga golongan yaitu Monosakarida (Glukosa), Oligosakarida (Glikogen) dan Polisakarida (Selulosa). Kebutuhan karbohidrat untuk anak sebanyak 60-70% dari energi total. (Waluyo, 2010: 75)

2. Protein

Protein merupakan zat yang dibutuhkan oleh tubuh, karena struktur

margarine, coklat manis dan buah alpukat. Dibutuhkan tubuh 15-20%.
(Uripi, 2004:15).

4. Vitamin

Vitamin adalah zat organik esensial yang dibutuhkan oleh tubuh dengan jumlah yang sedikit sebagai pemelihara kesehatan dan pertumbuhan. Vitamin dibedakan menjadi dua berdasarkan kategori larut air dan larut lemak, vitamin larut air adalah thiamin (vitamin B1), riboflavin (vitamin B2), piridoksi (vitamin B6), niasin, folasin, asam pantotenat, biotin dan sianokobalamin serta asam askorbat (vitamin C). Untuk vitamin larut lemak ialah retinol (vitamin A), kaliferol (vitamin D), tokoferol (vitamin E) dan vitamin K.

a) Thiamin (Vitamin B1)

Vitamin ini berperan sebagai perangsang nafsu makan, selain memacu pertumbuhan dan kesehatan syaraf. Namun vitamin ini juga bisa menyebabkan penyakit beri-beri.

d) Niasin

Vitamin ini berfungsi dalam otak dan peredaran darah, jika kekurangan vitamin ini bisa menyebabkan sakit kepala, sakit pada gangguan anggota badan, lesu dan tidak bersemangat serta gangguan pencernaan.

e) Asam Folat

Vitamin ini melindungi anak dari serangan cacing atau parasit yang terdapat dalam saluran cerna. Selain itu vitamin ini berperan dalam pembentukan sel darah merah dan pertumbuhan, kekurangan vitamin ini bisa menyebabkan anemia dan hambatan pertumbuhan.

f) Siano-kobalamin

Vitamin ini dikenal sebagai B12, yang bekerja sama dengan

sangat diperlukan anak dalam pengobatan dengan antibiotic untuk jangka waktu yang lama. Vitamin B5 mampu mengurangi racun yang dihasilkan oleh obat tersebut.

h) Biotin

Vitamin ini mampu mencegah penyakit eksem (bintik merah dan terasa gatal) pada kulit kepala bayi, yang sering ditemui

5. Mineral dan Air

Mineral dan air sebagai zat pengatur, dibutuhkan tubuh dalam jumlah yang besar. Mineral digunakan anak sebagai salah faktor yang menunjang pertumbuhannya, mineral yang berguna antara lain: kalsium, besi, iodium, flour dan fosfor. Kebutuhan air pada anak sehat usia 4-5 tahun adalah 100-110 ml per kg berat badan sehari Persagi (dalam Urip, 2004:17)

2.2.2 Fungsi gizi

Menurut Dudek (dalam Urip 2004:17) Fungsi zat gizi secara umum

1. Karbohidrat

Karbohidrat dalam makanan dapat berbentuk pati seperti yang terdapat dalam sereal atau pun gula seperti yang terkandung dalam buah-buahan. Fungsi dari karbohidrat adalah menyediakan energi yang dibutuhkan tubuh. Kelebihan karbohidrat, disimpan sebagai glikogen atau diubah menjadi lemak yang siap diubah kembali menjadi energi ketika tubuh membutuhkannya. Selain itu fungsi karbohidrat didalam tubuh adalah :

- a. Melindungi protein agar tidak dibakar sebagai penghasil energi. Bila karbohidrat yang dikonsumsi tidak mencukupi untuk kebutuhan energi dan jika tidak cukup terdapat lemak didalam makanan atau cadangan lemak yang disimpan di dalam tubuh, maka protein akan menggantikan fungsi karbohidrat.
- b. Membantu metabolisme lemak dan protein, dengan demikian dapat mencegah terjadinya ketosis dan pemecahan protein yang berlebihan.

2. Lemak

Lemak dalam makanan dapat berbentuk minyak seperti yang ditemukan dalam biji-bijian, mentega ataupun berbentuk lemak seperti yang terdapat dalam daging. Lemak berperan dalam penyediaan energi, melarutkan vitamin larut lemak, juga sumber asam-asam lemak esensial. Selain itu, lemak berperan dalam pembentukan membran sel, agen pengemulsi, isolator panas tubuh, melindungi organ tubuh dan bersama protein sebagai alat angkut dalam metabolisme. Kelebihan lemak disimpan dalam tubuh yang akan diubah menjadi energi bila dibutuhkan oleh tubuh.

3. Protein

Protein dalam makanan dapat berupa kaseinyang ada dalam susu, atau albumin dalam telur, globulin dalam kacang-kacangan dan gluten dalam gandum. Fungsi utama dari protein adalah membentuk jaringan baru dan memperbaiki jaringan yang rusak dalam tubuh. Protein pun berperan dalam sintesis enzim, hormon, antibodi juga sebagai penyedia

Air memiliki fungsi yaitu: memelihara bentuk dan fungsi sel, mengatur suhu tubuh, membantu mencerna makanan dan absorbs zat gizi, sebagai transportasi zat gizi dan oksigen ke dalam sel, melarutkan vitamin, mineral, glukosa dan asam amino sehingga fungsi berbagai organ dalam tubuh dapat berjalan, berpartisipasi dalam reaksi biokimia di dalam tubuh, sebagai pembentuk berbagai enzim dan hormon, serta membantu mengeluarkan racun dan zat yang tidak berguna dalam tubuh.

Kalsium, fosfor, besi, iodin, merupakan sebagian mineral yang ditemukan dalam bahan pangan dalam bentuk komposisi organik dan anorganik. Mineral dibutuhkan dalam pembentukan tubuh seperti pembentukan tulang, gigi dan struktur jaringan. Mineral juga berperan dalam pengaturan proses metabolisme dalam tubuh seperti kontraksi otot, stimulus saraf, dan lain-lain.

5. Vitamin

Vitamin yang ada dalam makanan terdiri atas vitamin larut lemak

susunan makanan yang dianjurkan adalah yang menjamin keseimbangan zat-zat gizi. Pengelompokan bahan makanan disederhanakan, yaitu didasarkan pada tiga fungsi utama zat gizi, yaitu sebagai sumber energi, sumber zat pembangun dan sumber zat pengatur.

Yetti Wira (dalam Djoko Pekik Irianto 2006: 65) gizi seimbang adalah “Ekspresi dari keadaan keseimbangan dalam bentuk variabel tertentu atau dapat dikatakan bahwa status gizi merupakan indikator baik buruknya penyediaan makanan sehari-hari”. Status gizi yang baik diperlukan untuk mempertahankan derajat kebugaran dan kesehatan, membantu pertumbuhan bagi anak, serta menunjang prestasi olahraga.

Berdasarkan penjelasan diatas gizi seimbang (*Balanced Diet*) adalah susunan pangan sehari-hari yang mengandung zat gizi dalam jenis dan jumlah yang sesuai dengan kebutuhan tubuh, dengan memperhatikan prinsip keanekaragaman pangan, aktivitas fisik, perilaku hidup bersih dan mempertahankan berat badan normal untuk mencegah masalah gizi

pemberi tenaga atau energi, penyokong pertumbuhan, pembangun dan pemelihara jaringan tubuh serta pengatur metabolisme (Santoso, 2013: 123).

Lestari, D (2017) nutrisi makanan sangat bermanfaat bagi tubuh dalam membantu proses pertumbuhan dan perkembangan anak serta mencegah terjadinya penyakit akibat kurang nutrisi pada tubuh seperti kekurangan energi dan protein, anemia, defisiensi yodium, defisiensi seng, defisiensi vitamin A yang menghambat proses tumbuh kembang anak. Sumber tenaga nutrisi dapat diperoleh dari karbohidrat sebesar 50-55%, dari lemak 30-35% dan protein sebanyak 15%. Pemenuhan nutrisi pada anak harus seimbang dan mengandung semua zat gizi yang diperlukan tubuh.

Menu makanan sehat memiliki syarat, menurut Santoso dalam buku Kesehatan dan Gizi (2013:123) yaitu :

1) Mengandung makanan yang memuaskan selera makan serta memberikan rasa kenyang.

KMS (Kartu Menuju Sehat) adalah alat yang penting untuk memantau tumbuh kembang anak. Aktifitas pemantauan tidak hanya menimbang dan mencatat saja melainkan juga harus menginterpretasikan tumbuh kembang anak kepada ibunya, sehingga ibu memahami bahwa pertumbuhan anak dapat diamati dengan cara menimbang teratur setiap bulan. KMS yang ada di Indonesia pada saat ini berdasarkan Baku WHO 2005 (WHO child Growth Standard 2005/WHOMGRS/WHO Anthro 2005). KMS dapat menggambarkan pola pertumbuhan anak yang teratur dan koheren (Soetjiningsih, 2013).

Depkes RI (2010) grafik pertumbuhan yang terdapat pada KMS digunakan untuk memantau pertumbuhan bayi setiap bulannya apakah bayi tumbuh normal atau mengalami gangguan pertumbuhan. Bila grafik berat badan bayi mengikuti grafik pertumbuhan pada KMS artinya anak tumbuh baik, kecil resiko anak untuk mengalami gangguan pertumbuhan. Sebaliknya bila grafik berat badan tidak sesuai dengan grafik pertumbuhan anak kemungkinan beresiko mengalami gangguan pertumbuhan.

Bedasarkan penjelasan diatas bahwa bekal makanan adalah makanan yang dimasukkan kedalam kotak atau tempat yang mempermudah dalam pembawaan, selain itu penyusunan menu makanan juga bisa mempengaruhi ketertarikan dalam mengkonsumsinya, makanan yang sehat dibutuhkan anak sebagai penunjang dalam beraktivitas sehari-hari, oleh karena itu pemenuhan makanan yang menyehatkan bisa melalui bekal makanan yang dibawa anak kesekolah.

2.4 Penelitian Relevan

Untuk menghindari duplikasi, penelitian melakukan penelusuran terhadap penelitian-penelitian terdahulu. Dari hasil penelusuran penelitian terdahulu tersebut didapat beberapa penelitian yang berkaitan dengan masalah yang akan diteliti. Yaitu:

1. Penelitian diambil dari Aolia Mumtakhonah (2019) dengan judul “Program Kerjasama Orang Tua dan Guru Dalam Pemberian Makanan Gizi Seimbang Di Tk Diponegoro 51 Batuanten Kecamatan Cilongok

We and our 21 IAB TCF partners store and access information on your device for the following purposes: store and/or access information on a device, advertising and content measurement, audience research, and services development, personalised advertising, and personalised content. ✕

formal (secara resmi) dan komunikasi non formal (tidak resmi). Dan keanekaragaman menu yang di rencanakan setiap minggunya di TK Diponegoro 51 Batuanten sesuai dengan anjuran gizi seimbang, hal ini dapat mengoptimalkan dalam program pemberian makanan gizi seimbang.

2. Penelitian diambil dari Desi Lestari (2017) dengan judul “Pemahaman orang tua tentang pemenuhan gizi anak melalui Lunch box (bekal makanan) di kelompok bermain IT Sekargading Semarang” dari penelitian ini mendeskripsikan mengenai pola konsumsi sayur dan buah anak usia 4-5 tahun pada masyarakat pesisir desa Randusanga Kulon Brebes. Hasil analisis data konsumsi sayur meliputi (1) jenis sayur yang tersedia (sayur asem, sop, dan tumis kangkung); (2) jenis buah yang tersedia (pisang, jeruk, dan kelengkeng); (3) jumlah sayur dan buah yang tersedia (untuk sayur hanya satu mangkuk berukuran sedang dan untuk buah hanya beberapa buah saja). Tujuan didalam penelitian tersebut adalah mengetahui tingkat konsumsi buah dan sayur pada masyarakat pesisir

BAB III

METODE PENELITIAN

3.1 Tempat dan waktu penelitian

Penelitian ini dilaksanakan di PAUD Bina Harapan Desa Muara Tabun. Penelitian ini dilakukan pada Semester Genap.

3.2 Populasi dan sampel

3.2.1 Populasi

Populasi adalah merupakan wilayah generalisasi yang terdiri dari obyek/subyek yang memiliki kuantitas dan karakteristik tertentu yang ditetapkan oleh peneliti untuk dipelajari dan kemudian ditarik kesimpulannya. Menurut Ismiyanto populasi adalah keseluruhan subjek atau totalitas subjek penelitian yang dapat berupa orang, benda, suatu hal yang di dalamnya dapat diperoleh dan atau dapat memberikan informasi (data) penelitian. Populasi dalam penelitian ini seluruh orang tua anak di Paud Bina Harapan Desa Muara Tabun.

We and our 21 IAB TCF partners store and access information on your device for the following purposes: store and/or access information on a device, advertising and content measurement, audience research, and services development, personalised advertising, and personalised content. ✕

sampling) adalah cara pengambilan sampel dengan memilih langsung dari populasi dan besar peluang setiap anggota populasi untuk menjadi sampel sangat besar (Ruqo'iye, 2012).

Pengambilan sample random sampling karena sampel yang diambil adalah orang tua anak yang bersekolah di PAUD Bina Harapan Desa Muara Tabun.

3.4 Jenis penelitian

Penelitian ini menggunakan jenis penelitian kuantitatif. Data kuantitatif adalah jenis data yang dapat diukur atau dihitung secara langsung, yang berupa informasi atau penjelasan yang dinyatakan dengan bilangan atau berbentuk angka.

Dalam hal ini data kuantitatif yang diperlukan adalah: Jumlah guru, siswa dan karyawan, jumlah sarana dan prasarana, dan hasil angket.

3.5 instrumen penelitian

Instrumen kisi-kisi ini berpedoman pada kajian teori didalam bab II dibagian indikator peran orang tua.

Pada metode ini, pertanyaan-pertanyaan masalah ditulis dalam format kuesioner lalu disebarakan kepada responden untuk dijawab, kemudian dikembalikan kepada peneliti. Dari jawaban responden tersebut, peneliti dapat memperoleh data seperti pendapat dan sikap responden terhadap masalah yang sedang diteliti. Angket dalam penelitian ini ditujukan untuk orang tua anak yang menyiapkan bekal makanan yang dibawa anak kesekolah.

3.7 Sumber data

Pengumpulan data dapat dilakukan dalam berbagai setting dan berbagai sumber dan berbagai cara. Bila dilihat dari settingnya data dapat dikumpulkan pada setting alamiah (natural seting), pada laboratorium dengan metode eksperimen, di rumah dengan berbagai responden, dan lain-lain. Bila dilihat dari sumber datanya, maka pengumpulan data dapat menggunakan sumber primer dan sekunder. Selanjutnya kalau dilihat dari segi cara atau teknik pengumpulan data, maka teknik pengumpulan data dapat dilakukan dengan interview, kuesioner (angket), observasi (Sugiyono, 2012: 193-194).

analisis sangat menentukan keakuratan pengambilan kesimpulan, karena itu kegiatan analisis data merupakan kegiatan yang tidak dapat diabaikan begitu saja dalam proses penelitian (Muhson, A. 2006).

Berdasarkan pengertian diatas analisis data adalah proses mencari dan menyusun secara sistematis data yang diperoleh dari hasil angket. Data yang telah terkumpul selanjutnya diolah dan kemudian dianalisis. Tujuan dari analisis datanya adalah untuk menyederhanakan data kedalam bentuk yang mudah dibacakan dan diinterpretasikan.

Teknik analisis data yang digunakan pada penelitian ini adalah statistik deskriptif untuk menganalisis respon orang tua. Jawaban setiap item instrumen mempunyai gradasi sangat menerapkan, kadang menerapkan, dan tidak menerapkan. Untuk keperluan analisis kuantitatif, maka jawaban itu dapat diberi skor.

Item jawaban SM (sudah menerapkan) diberi skor 3

BAB IV

HASIL DAN PEMBAHASAN PENELITIAN

4.1 Deskripsi data

Penelitian ini merupakan penelitian kuantitatif yang dilaksanakan di PAUD Bina Harapan desa Muara Tabun. Metode analisis data menggunakan teknik statistik deskriptif. Deskripsi data disini merupakan upaya yang dilakukan untuk menerangkan hasil yang ditemui dari penelitian yang menerangkan secara rinci berupa data-data yang akan dipaparkan dengan baik. Data-data tersebut akan memudahkan pembaca untuk memahami hasil dari temuan penelitian ini. Adapaun hasil yang dipaparkan disini yaitu terkait mengenai indikator peran orang tua terhadap pemberian gizi seimbang untuk bekal anak ke sekolah sebagai berikut :

4.1.1 Deskripsi data hasil secara umum

Hasil sebaran angket dari 35 responden orang tua dari 35 orang anak

12	35	0	0	35	25	25	10	0	35
13	17	10	8	35					
Jumlah						531	179	105	35

Catatan :

SM : Sudah Menerapkan (3)

KM : Kadang Menerapkan (2)

TM : Tidak Menerapkan (1)

Jadi dari pengolahan data hasil sebaran angket secara umum diatas, maka dapat disimpulkan jumlah jawaban “SM” adalah 531, jawaban “KM” adalah 179, jawaban “TM” adalah 105. Kemudian data yang telah terkumpul diolah dengan statistik, maka diperoleh hasil perhitungan seperti pada tabel 4.2 berikut ini:

1. Bagi orang tua

Hendaklah orang tua lebih memahami dengan asupan gizi yang sesuai dengan kebutuhan anak, selalu menyediakan menu makanan yang berkualitas dan bergizi seimbang untuk menunjang tumbuh kembang anak, serta senantiasa memperhatikan kebersihan peralatan dan bahan makanan yang akan dibawa anak kesekolah.

2. Bagi guru

Hendaklah guru juga menjelaskan kepada anak mana makanan yang bergizi dan mana yang kurang bergizi. Guru juga harus memperhatikan tata cara makan anak, seperti mencuci tangan sebelum makan dan berdoa.

3. Bagi peneliti

Hendaknya hasil penelitian ini dapat ditindak lanjuti dengan mencari solusi kedepannya baik dengan macam-macam objeknya
